

A Parts Services appointed Edbro agents of skip and hook lift equipment for the West Midlands and Mid-Wales

A Parts Services, parts supply and maintenance specialists for commercial vehicles, has been appointed as the main distributor of Edbro's range of hydraulic skiploader and hooklift systems to the West Midlands and Mid-Wales. The company will deliver top-level dealership servicing, maintenance and technical support for the Edbro range, reducing costs and lead times for local customers.

Edbro has recently introduced the new telescopic arm skiploader and a lightweight hooklift system to the market. Both products utilise Edbro's unrivalled expertise in producing lightweight equipment; meeting modern requirements for increased productivity, optimum chassis utilisation and maximum safety. The MB14T skiploader provides a lift capacity of up to 14 tonnes, while the TH23 power hook provides a lift capacity up to 23 tonnes. Both offer a fast lift-off facility to dramatically reduce the lifting cycle.

David Wilson, Owner of A Parts Services, comments: "We are delighted to be working with Edbro as one of the official agents of the new skip and hook lift equipment. Since the company formed we have been committed to delivering premium service and quality parts; Edbro has a fantastic reputation in our industry and we are happy to recommend their products to customers. As official dealers for Edbro we are now able to offer new levels of product supply and servicing."
