

THE NEW MERCEDES ZETROS RELIES ON EDBRO'S UB CYLINDER

Mercedes-Benz has extended its position in the specialist off highway market with the UK launch of the Zetros with 4x4 and 6x6 models.

The UK's first 6x6 Zetros has recently been built by Abba Commercials with a tipper body and Edbro UB underfloor tipping gear.

Targeting the winter maintenance market, the vehicle has been equipped with a 9 cubic metre gritter unit mounted inside the tipper body and with a front mounted V plough.

Mark Hopkins, Unimog Sales Director commented, 'The Zetros is an important addition to our product range and we have already supplied 4x4 models to Aberdeen Airport. We're delighted to be working with Edbro on the latest 6x6 model. Edbro has a long standing reputation for reliability and durability which is exactly the ethos of the Zetros range'.
